

Watch closely now, lest the quickness of the hand deceive the eye. Instantly, the Little Giant Ladder changes from an A-frame to an extension ladder, adjustable rung-by-rung to the equivalent of a 17' extension ladder! Observe the flared legs and skid-resistant feet—safety features to help even the most demanding user feel secure. In a tricky business, no ladder is safer than the Little Giant System.

With a snap of the fingers, the Little Giant Ladder quickly becomes two scaffold trestles. Insert a Little Giant Scaffold Plank² and you can cover large areas without constantly moving your ladder. It's adjustable up or down in one-foot increments.

² Model Numbers 10069, 10813, or 11016.

Behind every feat of magic is a "reality" that makes the magic possible. One of the realities behind the Little Giant Ladder is its hinge. Because the hinge must handle more stress than any other part of the ladder, it was engineered to be the system's strongest component—even stronger than the rungs and rails. Plus, it's easy to operate. A simple flick of the wrist is all it takes.

Even though it won't quite fit into a magician's hat, the Little Giant will fit nicely in a hatchback or in the trunk of most cars. No other 17' ladder stores as easily as the Little Giant Type II Model 17'.
